

nShield Remote Administration

- Lets you administer distantly-located nShield Solo and Connect Hardware Security Modules (HSMs) from any location, whenever you choose
- Cuts travel time and cost while adding 24 × 7 access to your HSMs
- Enables a wide variety of functions via the remote presentation of nShield smart cards including upgrading firmware, checking HSM status, and running utilities
- Eliminates the risk of carrying high value smart cards to remote locations

nShield Remote Administration

Feature Overview

nShield Remote Administration

Feature Overview

Remote Administration uses the following components to locally manage remote HSMs:

- Remote Administration Cards—Custom smart cards equipped with a nCipher applet
- Trusted Verification Devices (TVDs)—nCipher smart card readers used with Remote Administration Cards to create a secure connection with the target HSM (includes Type A USB connector)
- Remote Administration Client (RAC) software—Simple GUI run on client laptop or workstation to configure connection to HSM

nShield Remote Administration creates a secure connection between your remote HSM and your local Remote Administration Cards and TVD, letting you present your quorum of smartcards and administer your HSMs as if physically present with the device. Communicating over your VPN, you control the HSM from a laptop or workstation via remote desktop or secure shell session.

OPERATIONAL FEATURES

Remote Administration lets you perform the vast majority of typical HSM functions including:

- Configuring new nShield HSMs
- Creating new Security Worlds—nCipher unique key management architecture—and enrolling new HSMs into existing Security Worlds
- Upgrading firmware and image files for maintenance and other updates
- Monitoring and changing HSM status and re-booting as needed

SECURITY FEATURES

Remote Administration includes the following to safeguard your transactions:

- Mutual authentication between Remote Administration Cards and HSM based on factory-issued warrants (like digital certificates) using Diffie-Hellman ephemeral key exchange
- AES256-equivalent crypto connection between Remote Administration Cards and HSM
- HSM electronic serial number verification by the card holder
- FIPS 140-2 certified firmware and Remote Administration Cards
- TVDs certified to Secoder protocol—inhibits malware on the client workstation from spoofing the HSM identity being passed to Remote Administration Cards

Please request the nCipher Remote Administration Security White Paper to learn more.

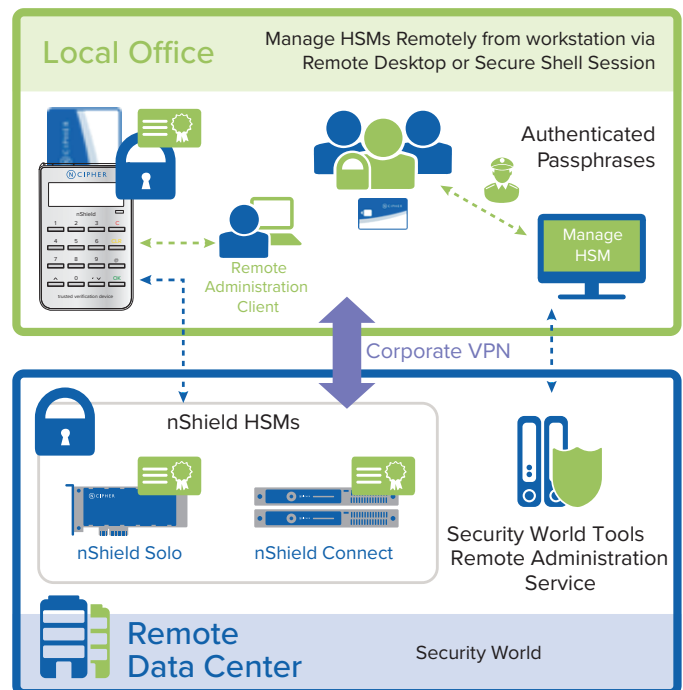

NSHIELD REMOTE ADMINISTRATION COMPATIBILITY AND PREREQUISITES

- nShield Solo PCIe and Connect HSMs
- RAC software compatible with Microsoft Windows, Linux and OS X
- nShield v12.00 and above software and 2.61.2 and above firmware
- Customer-supplied LAN or VPN and remote access solution

GETTING STARTED WITH NSHIELD REMOTE ADMINISTRATION KITS

Remote Administration Kits are available in a variety of tiers depending on HSM estate size. Additionally, Remote Administration can be expanded to support larger estates post-installation by purchasing upgrade kits. The table below shows the kit tiers available for purchase.

Tier	Remote HSMs Served	Remote Admin Cards	TVDs	Client DVDs
1	1 to 10	20	2	2
2	11 to 20	50	5	5
3	21 to 40	100	10	10
4	40 or more	200	20	20
